About Fourier IT Innovation

Fourier has been a strategic and trusted partner to South Africa's organisations and maintained a growing client base for the past 17 years. Fourier offered services to improve and automate business processes, stabilise and mature IT operations, develop critical applications, and consult across Technology and Business Departments.

Fourier IT Innovation are the preferred supplier to a number of organisations within the financial and chemical sectors among others, providing software development services across the Software Development Life Cycle, combined with 24x7 Support Services. Fourier is leading the way in South Africa today by delivering responsive cloud-based applications with the following technology stack: HTML5, Angular JS.

In addition to these, Fourier has internally developed and owns software solutions which includes Biometric Solutions, Order Management Systems, Change Management Modules and Single Sign-On Solutions.

Fourier have a compliment of locally skilled technical and management resources that understand the South African market and its unique cultural dynamics. This enables the delivery of maximum value, by the building of relationships of trust and open communication. With established Offices in Gauteng and Cape

Town and resellers and partners across South Africa, Fourier are able to implement and support enterprise solutions across South Africa.
