Super Vision Data Center Management

Advanced Management

- α End to end security system
- α Manage employees, visitors and contractors with a single biometric platform
- α IntelliRelay™ technology; allows one biometric reader to manage multiple relays with individual access to each relay
- α Minimal human interface required
- α Capture once use many principle
- α Know who is in your building
- α Professional welcoming of visitors and contractors
- α Added value for clients hosting at the datacenter
- α No more key-based access
- α Optional sms integration
- α Track who is opening your cabinets
- α Time & Token based access
- α Easily obtain trend reports of datacenter usage
- α Full control over security

Value adds

- α Advanced access to data cabinets: no more keys and pin-codes
- α Real-time monitoring
- α Live clocking data
- α Owner of cabinet can receive an sms to notify when their cabinet is opened; also for how long it was open (cost savings)
- α Compatible with various software platforms
- α Interactive reporting
- α Proven company stability and ensuring product support and continuity
- α Low cost on maintenance
- α Movement audit trails
- α In-house customization and development
- α Affordable solution for state of the art access control
- α Export reports to multiple formats
- α Use in conjunction with the visitor management solution
- α Increase efficiency with trend reports of clients
- α The system is completely scalable to the size you require
- α Cost effective solution

About Fourier IT Innovation

Fourier has been a strategic and trusted partner to South Africa's organisations and maintained a growing client base for the past 17 years. Fourier offered services to improve and automate business processes, stabilise and mature IT operations, develop critical applications, and consult across Technology and Business Departments.

Fourier IT Innovation are the preferred supplier to a number of organisations within the financial and chemical sectors among others, providing software development services across the Software Development Life Cycle, combined with 24x7 Support Services. Fourier is leading the way in South Africa today by delivering responsive cloud-based applications with the following technology stack: HTML5, Angular JS.

In addition to these, Fourier has internally developed and owns software solutions which includes Biometric Solutions, Order Management Systems, Change Management Modules and Single Sign-On Solutions.

Fourier have a compliment of locally skilled technical and management resources that understand the South African market and its unique cultural dynamics. This enables the delivery of maximum value, by the building of relationships of trust and open communication. With established Offices in Gauteng and Cape

Town and resellers and partners across South Africa, Fourier are able to implement and support enterprise solutions across South Africa.
